

**TSAP**

**The TSAP model - Heavy Duty Shredder** - is characterised by a remarkable robustness. The body is built with very thick, high-resistant sheet steels. To obtain a perfect mulching, a row of counter blades is welded along the internal part of the body. The model can be equipped with hammer or universal blades, which are interchangeable, and can be used in green areas, for clearing out underbrush, for cutting grass, olive, vine, fruit-trees runners as well as other lopped branches of up to 10 cm diameter. With this robust and highly reliable machine high performance with low power absorption is guaranteed. According to the required usage, the model can be equipped with side skids or rear roller, shift (mechanical, with screw or hydraulic), front protections (wings or chains). The TSAP model, like all other m.e.a.a.t. machines, is equipped with protections as per CE standards.

Trimblings, grass, harvest residues, and underbrush chopping has many advantages:

- it guarantees a uniform humus supply to the soil, that is essential to make it fertile
- it helps the elimination of parasites
- it is ecological thanks to the total elimination of weed-killers
- it improves transplanting and harvesting
- it clears out underbrush.

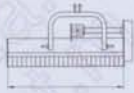

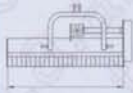

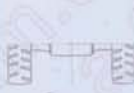

The wide range of m.e.a.a.t. Shredders & Choppers benefits by a very high technology and answers to three basic criteria:

- top quality chopping
- high efficiency
- first quality manufacturing, solidity and endurance.

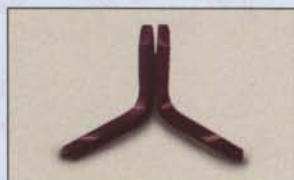

Our machines guarantee the optimal performance, which farmers expect from a modern and top quality machine.
